

The **agentic era** of IRM is here.

Anecdotes brings a workforce of autonomous AI agents, and the **structured, audit-grade data** they stand on, directly into ServiceNow. The next generation of GRC isn't a faster form to fill out. It's agents that collect, test, and remediate on their own, grounded in evidence you can defend. **The foundation for the AI transformation of your entire GRC program.**

THE DATA FOUNDATION

Manual evidence → **data pipelines**

THE NEW WORKFLOW

Manual workflows → **agents**

Agents are the new workflow. **Data is the foundation.**

Every GRC task you run today, chasing evidence, mapping it to controls, judging pass or fail, writing the report, is a manual workflow. Anecdotes replaces each one with an autonomous agent, and every action is grounded in structured, credible evidence. Together, that is the foundation on which the AI transformation of GRC is built, natively inside ServiceNow.

USE CASE · CCM

Continuous control monitoring that closes the loop

A config drifts overnight. An agent re-collects evidence, re-runs the test, breaches your threshold, and **flips the control to Non-Compliant** in ServiceNow. Owner alerted. No analyst. No quarter-end surprise.

UNSTRUCTURED EVIDENCE

Two agents turn unstructured evidence into credible artifacts

One agent **extracts testable requirements** from a control objective. A second dynamically tests any unstructured evidence, reports, policies, screenshots, and writes back structured, audit-grade artifacts. Unstructured in, defensible data out.

Build your own with Data Studio, no code required.

Create and curate your own evidence artifacts and data connectors with AI assistance.

It speaks fluent ServiceNow IRM

Agents read & write your standard IRM records, no new object model.

CONTROL OBJECTIVES

CREATE · REPORT

Bulk-create from 60+ frameworks; objective-level reports roll up linked controls & evidence.

CONTROLS

TEST · UPDATE

Continuously tested with AI-ranked evidence mapping; status auto-updates on threshold.

POLICIES

EXTRACT · MAP

Policy Guardian extracts statements, maps evidence, and suggests tests.

RISKS

INFORM · REFRESH

As controls & evidence move, the risks they mitigate reflect live posture.

EVIDENCE

COLLECT · LINK

250+ connectors feed artifacts, linked to the right controls automatically.

How it works

Agents read & write your standard IRM records, no new object model.

Controlled AI perimeter LLM access via GCP Vertex AI as a fully governed perimeter. The right model per task, quality-evaluated.

Your cloud, your data Data delegation across AWS, Azure & GCP keeps evidence in your environment.

WHY ANECDOTES

Running an **Agentic** Enterprise GRC Program

Your GRC data and agents work across Anecdotes & ServiceNow IRM, no context switching.

01

GRC at Enterprise Scale

Anecdotes keeps your entire GRC program current across hundreds of controls, frameworks, and evidence items, automatically, inside ServiceNow IRM.

02

Native to ServiceNow IRM

Reads and writes standard IRM records. No new object model, no migration, no parallel system of records and actions to maintain.

03

A workforce of GRC agents

Deploy agents for continuous control monitoring, evidence collection, gap analysis, and reporting inside ServiceNow IRM, scheduled or on demand.

Get **Agentic IRM** Operational Quickly

Install from the ServiceNow Store, connect your data, and your first agents are live.
